● THE CONTEXT – ABOUT *GROWING UP IN IRELAND*

Growing Up in Ireland is the national longitudinal study of children. It is the most significant study of children ever to have taken place in this country and will help us to improve our understanding of all aspects of childhood and child development.

Taking place over seven years, the study is following the progress of two groups of children: a Child Cohort of 8,500 children interviewed at 9 and 13 years and an Infant Cohort of 11,100 children interviewed at 9 months and 3 years.

The main aim of the study is to paint a full picture of children in Ireland and how they are developing in the current social, economic and cultural environment. This information will be used to assist in policy formation and in the provision of services which will ensure that all children have the best possible start in life.

Growing Up in Ireland is a Government study. The Department of Children and Youth Affairs is funding it in association with the Department of Social Protection and the Central Statistics Office. The Department of Children and Youth Affairs is overseeing and managing the study, which is being carried out by a consortium of researchers led by the Economic and Social Research Institute (ESRI) and Trinity College Dublin.

● CONFERENCE AIMS

This is *Growing Up in Ireland's* third annual research conference and has been organised by the Study Team to launch a series of Key Findings from the recently completed Infant Cohort at 3 years as well as some of the first longitudinal findings from the study. The conference will also provide a platform for discussion on a broad range of research from both the Infant and Child Cohorts.

The Keynote Speaker is Professor Edward Melhuish, Professor of Human Development at Birkbeck, University of London and Visiting Professorial Fellow at the Institute of Education, University of London. Approximately 24 papers will be presented at the conference by researchers from a wide range of third level and research institutions. These will be based on data from *Growing Up in Ireland's* Child and Infant Cohorts and will focus on a range of topics including health, parenting and education.

● KEYNOTE SPEAKER

Professor Edward Melhuish

Professor Melhuish is an internationally recognised expert in the study of child development and childcare and has extensive experience with longitudinal studies. His research interests include child development, parenting, childcare and early education.

For several years Professor Melhuish has been a Principal Investigator on the *Effective Provision of Pre-school Education (EPPE)* and *Effective Pre-school Provision in Northern Ireland (EPPNI)* projects based in England and Northern Ireland, which are following 4,000 children from 3 to 7 years of age. These studies are investigating the effects of family, community and pre-school experiences (and their interaction) on child development.

Professor Melhuish is also Executive Director of the *National Evaluation of Sure Start* and his work undertaken to date has addressed many issues relevant to Sure Start including cognitive, language and behavioural development of young children and the role of family factors, home environment, childcare and pre-school experience upon children's development.

Professor Melhuish has written reports for government departments, policy makers, practitioners and academic researchers. He has over 150 scientific papers, chapters and books, some of which have been translated in up to eight languages.
